

CM66

Grower's Mix With Perlite

PRODUCT DESCRIPTION:

CM66 is a peat based professional growing media suitable for a wide range of applications from hard wood cuttings to large containers. Canadian sphagnum peat moss is used to maintain water retention throughout cropping time. Perlite is included as an inert aggregate to provide superior drainage to media applications. Compost is used to aid in moisture retention and buffering the pH from drastic swings in value. Sand has been added to provide weight to the media and to prevent strong winds from blowing over containers. CM-66 works well in above grade seasonal planters. A fertility program is advised through liquid feed, top-dressed CRF or utilize incorporated CRF, contact Midwest Trading Sales team for more information.
